The following is an examiner's statement of reasons for allowance: all four references show linkage operated shears or nippers that are spring biased. Aamodt shows the material of claim 1 except that the spring 52 does not mount between the first end of the first handle and the first end of the second handle. He does show the first and second handles a blade seat a pivotally mounted blade and a link to move the blade. Changing the position of the spring to be as claimed would not be possible without redesigning the handles and movable blade and is therefor not obvious. Pazos is close to the claimed invention but the movable blade is not pivoted at an intermediate section. Also there is no blade seat, only an edge on the blade. It may be obvious to add a blade seat but there is no reason to pivot the movable blade at an intermediate point. This would cause the needless lengthening of the blade. The organization of the Foltz et al. device is does not approximate that of claim 1. Nishikawa et al fails to show a blade seat, a link pivoted at an intermediate point of the handle and a spring mounted between the first end of the first handle and a first end of the second handle. There is no teaching of modifying the device to include such features either.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
